New STAR™ Super Seal Product Line

The result of multiple years of careful evaluation and research on mechanical O-ring connection performance, coupled with the high performance of our STAR Super Seal technology and the versatility of our Centron joint technology, enables us to significantly improve this product line and moves it to the next level of performance and reliability.

Earlier this year, Fiber Glass Systems announced the integration of the Centron brand technology into a new and improved oil and gas offering for O-ring connections. Since that announcement, manufacturing at Mineral Wells has ceased and we are now in the final phase of operations, including all aspects of the transition to other facilities in the U.S.

In addition to our objective to consolidate manufacturing operations, this integration brings about important improvements in quality and performance across all our lines of products. The result of multiple years of careful evaluation and research on mechanical O-ring connection performance, coupled with the high performance of our STAR Super Seal technology and the versatility of our Centron joint technology, enables us to significantly improve this product line and moves it to the next level of performance and reliability:

- Our new O-ring product offering will be marketed under the brand name STAR Super Seal.
- Our new line brings together the best of the best from both Centron and STAR Super Seal technologies.
- Advancements in large diameter and higher pressures performance enables us to offer API 15HR designed products across an expanded range, including but not limited to:
 - 6" up to 3,000 psi, 8" up to 2,500 psi, 10" up to 2,250 psi, 12" up to 2,000 psi and 14" to at least 1,000 psi and possibly higher.
- Our new STAR Super Seal line is designed to be installed quickly with a one-step position based joint make-up process, eliminating extra steps during installation.
- Underpinned by new research, this integration will eventually enable us to provide these products from multiple sources globally. It will give our customers peace of mind that our technology is interchangeable across our key manufacturing facilities.

8 inch, 2,500 psi STAR Super Seal pipe with SS HP connection

The bottom line – improved technology, enhanced quality and performance, and faster installation. All backed by Fiber Glass Systems' reputation as the global leader in composite piping systems technology. This is what differentiates us from our competitors.

Our technical and commercial resources are available to learn more about STAR Super Seal.

We thank you for your trust in Fiber Glass Systems.
