

Odor Control Duct Project

Application: Hydrogen sulfide fumes at ambient temperature with a pressure rating at 25 psi

Location: Waste Treatment Facility - Grand Prairie, Texas

Product: This project consisted of approximately 5,800 feet of Fiber Glass Systems (FGS) duct. FGS produced 12 shop prefabricated piping sections for the project. F-CHEM® large diameter filament wound piping in 14"-36" diameter was used in the odor control duct systems of this wastewater treatment plant.

Features & Benefits: Fiber Glass Systems was selected as the piping manufacturer for this wastewater treatment plant because our application engineering department was able to offer excellent design support services. FGS was also selected because of over fifty years of experience in the fiberglass piping market and the ability to provide technical support at the job site.
