

Natural Gas Dehydration System

Application: Natural Gas Pipeline

Location: Arizona

Product: Red Thread® Pipe and Fittings

Features & Benefits: Glycol dehydrators are used in natural gas pipeline systems to dry or condition the natural gas. Removing water vapor prevents hydrate formation and corrosion of the metallic gas pipeline. However, glycol and glycol-water mixtures can lead to corrosion in metallic piping systems. This customer used a Red Thread II piping system to avoid corrosion worries with a trouble-free, cost-effective system.
